Daily Coding Problem

Good morning! Here's your coding interview problem for today.

This problem was asked by Google.

Given pre-order and in-order traversals of a binary tree, write a function to reconstruct the tree.

For example, given the following preorder traversal:

[a, b, d, e, c, f, g]

And the following inorder traversal:

[d, b, e, a, f, c, g]

You should return the following tree:

```
  a
 / \
b   c
```

```
/ \ / \  
d e f g
```
